Please reject the NAB's petition 04-160. Just this past Memorial Day weekend my family and I were driving to and from Oklahoma to visit with other family members. Without the weather information available on our XM satellite radio we could have been caught in some severe, deadly weather. Being unfamiliar with the radio stations in between Oklahoma and our duty station here in Fort Polk Louisiana we didn't know what stations even covered the areas we travelled through. Some of the areas were rather remote and we were unable to receive any other signal, other than our XM satellite radio signal. By having the XM instant weather we could check whenever we thought there might be severe weather. We made it home safely with my husband's new Harley Davidson he rewarded himself with after serving safely in Iraq and Afghanistan for a year and a half.

Thank you,

Aarlene Campion
